

# Managed AV (Overview)

Managed Antivirus powered by Bitdefender combines best-in-class protection against malware and viruses with excellent performance in minimizing false positives and low system overhead so you can deliver robust, reliable protection with the lowest possible management effort.

Bitdefender®

- Behavioural Scanning to complement Active Protection and maximize effectiveness against hard-to-detect threats
- Configure every aspect of the Managed Antivirus agent including scan schedules, remediation action (i.e. what to do if a threat is discovered) and file and folder exclusions

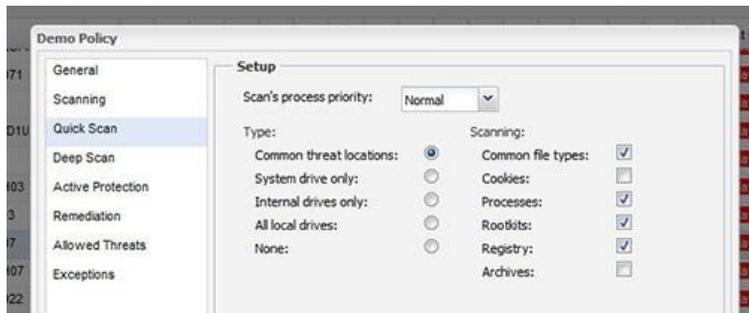

- Receive alerts if a threat is quarantined and choose to delete or release from quarantine
- Deploy and configure AV software to all or some servers and workstations via our Remote Management Service.

- Apply multiple AV/Malware configuration policies

- The Protection Policy configures every aspect of the Managed Antivirus agent including scan schedules, remediation action (i.e. what to do if a threat is discovered) and file and folder exclusions. Default policies are supplied for Laptops, Desktops, different versions of Small Business Server, Exchange Servers, SQL Servers and generic servers, all of which follow Microsoft's own recommendations for file and folder exclusions.
- Simple and clean user interface - no training required
- "Snooze" feature to disable antivirus for a short time in order to perform maintenance, simplifying policy management
